CampusMate

College Helpdesk Chatbot

Project Prompt, Documentation & GitHub Publishing Guide

College	Gouthami College
Theme	Blue and white • Responsive • Beginner-friendly
Project type	College mini project / FAQ chatbot

Purpose: A simple website that helps students find common college information using predefined FAQ answers and keyword matching. It does not require a live AI service or external API.

Prepared for student project development and public GitHub sharing.

1. Project Overview

CampusMate is a responsive college helpdesk chatbot website. Students can type questions or tap quick-question buttons to view common information about the college. The interface should work on mobile phones and laptops and use a clean blue-and-white design.

Project goals

- Make basic college information quick and easy to access.
- Provide a beginner-friendly mini project with readable, maintainable code.
- Use local predefined answers and simple keyword matching instead of a live AI service.
- Clearly label any unconfirmed college information as demo information.

2. College Contact Information

Field	Value
College name	Gouthami College
Address	Gouthami College, Proddatur, Pedisetipalli
Mobile number	7167397615 (clickable tel: link)
Email	gowthami@gmai.com (clickable mailto: link)

Use these details exactly as supplied. Keep them in one clearly named editable configuration section/file so they can be updated later. Do not silently correct spelling or verify assumptions.

3. Chatbot Features

- Chat input field and Send button.
- Show user messages and chatbot responses in separate, clearly distinguishable chat bubbles.
- Display this exact welcome message: “Welcome to CampusMate! How can I help you today?”
- Clear Chat button that clears the conversation and restores the welcome message.
- Predefined FAQ responses and simple keyword matching; no external AI API.
- Responsive layout with accessible labels, readable contrast, and keyboard-friendly controls.

4. Frequently Asked Questions

College contact information

Return the college name, phone number, email, and address exactly as listed in Section 2.

College address and location

Gouthami College, Proddatur, Pedisetipalli.

Library timings

If official timings have not been confirmed, say: “Library timings are demo information. Please contact the college office to confirm.”

Available departments

Show departments only when confirmed by the college. Otherwise mark the list as demo information and advise students to contact the office.

College facilities

Show facilities only when confirmed. Otherwise clearly label examples as demo information.

Examination information

Explain that exam schedules and notices must be confirmed through official college notices or the college office.

Holiday information

Explain that holiday schedules can change and should be confirmed through official college notices or the office.

How to contact the college office

Provide the supplied phone number and email as clickable links.

Unknown question response (exact)

“Sorry, I don't have that information yet. Please contact the college office.”

5. Quick Question Buttons

- College Address
- Contact Number
- Email Address
- Library Timings
- Departments
- College Facilities

Each button must trigger the same relevant answer that would be returned if the student typed a matching question.

6. About Section

Suggested About text: “CampusMate is a student-friendly college helpdesk mini project designed to make college information easier to access. It provides quick answers to common questions through predefined FAQs and simple keyword matching.”

7. Technical Requirements

- Build the actual working application using Base44-supported tools; do not deliver only a mockup or description.
- Use a modern blue-and-white visual theme and responsive mobile/desktop layouts.
- Keep FAQ answers and contact details easy to edit.
- Avoid external APIs, paid AI services, unnecessary integrations, and authentication unless required.
- Clearly mark unconfirmed details such as library hours, departments, facilities, exams, and holidays as demo/unverified information.
- Use clean, beginner-friendly code and descriptive names for components, functions, and configuration.

8. Testing Checklist

- The welcome message appears when the page opens.

- Typing a question and pressing Send displays the user question and a relevant answer.
- Contact, address, library, departments, facilities, exams, holidays, and office-contact FAQs are handled.
- Unknown questions return the exact fallback response.
- All six quick-question buttons work and show the correct answer.
- The phone number opens a phone/dialer link using tel:7167397615.
- The email opens an email app using mailto:gowthami@gmai.com.
- Clear Chat removes previous messages and restores the welcome message.
- The page remains usable on a mobile phone and a laptop.
- Contact information is consistent everywhere and matches the supplied details exactly.
- Unconfirmed college facts are visibly labelled as demo information.

9. Base44 Build Prompt

Copy the prompt below into Base44. Build in small iterations if needed, and test each feature before adding more.

```
Build a complete, professional, beginner-friendly responsive college mini project named
CampusMate – College Helpdesk Chatbot.

Design:
- Modern blue-and-white theme, clean typography, accessible contrast, responsive layout
for mobile and desktop.
- Sections: Home/chatbot, Quick Questions, About, and Contact Us.
- Use simple, clear labels and friendly student-focused copy.

Contact details (use exactly as written):
- College Name: Gouthami College
- Address: Gouthami College, Proddatur, Pedisetipalli
- Mobile Number: 7167397615
- Email: gowthami@gmai.com
Make phone and email clickable using tel:7167397615 and mailto:gowthami@gmai.com. Keep
all contact details easy to edit.

Chatbot:
- Show this exact welcome message: “Welcome to CampusMate! How can I help you today?”
- Add a text input, Send button, separate user/bot message bubbles, and Clear Chat button.
- Use predefined FAQ data and simple keyword matching only. Do not use a live AI API, paid
AI service, or external API.
- Support FAQs for contact details, address/location, library timings, departments,
facilities, exams, holidays, and how to contact the office.
- If asked for phone, email, or address, return the exact supplied details.
- For unknown questions, return exactly: “Sorry, I don't have that information yet.
Please contact the college office.”
- Clear Chat must clear the conversation and restore the welcome message.

Quick question buttons:
College Address, Contact Number, Email Address, Library Timings, Departments, College
Facilities. Each button must display the appropriate answer.

About text:
“CampusMate is a student-friendly college helpdesk mini project designed to make college
information easier to access.”

Accuracy:
- Do not invent official library timings, department lists, facilities, exam dates, or
holidays.
- If these facts are not confirmed, clearly mark them as demo/unverified information and
direct students to the college office.
- Keep contact details consistent everywhere.
```

```
Technical:
- Use Base44-supported features, clean beginner-friendly structure, descriptive names,
and editable FAQ/contact data.
- No authentication unless necessary.
- Build the working app, not just a static design. Test all chat flows, quick buttons,
clickable contact links, Clear Chat, and responsive layouts.
- Provide a short testing checklist and explain any remaining limitations.
```

10. GitHub Repository Structure

```
CampusMate/
■■■ README.md
■■■ CampusMate_Project_Documentation.pdf
■■■ CampusMate_Base44_Prompt.txt
■■■ .gitignore
```

Important note

Base44 may host the running application separately from the source files you publish to GitHub. Export or copy the actual app source from Base44 if your plan/workflow supports it, then add the source files to this repository. This starter pack includes documentation and publishing files; it does not claim to contain exported Base44 application source code.

11. Publish to GitHub

Option A — GitHub website (beginner-friendly)

- Sign in to GitHub and choose New repository.
- Name it campusmate-college-helpdesk-chatbot. Add a short description and choose Public if you want to share it.
- Create the repository. Use Add file → Upload files to upload README.md, CampusMate_Project_Documentation.pdf, CampusMate_Base44_Prompt.txt, .gitignore, and your exported app source files.
- Commit the files with a message such as “Add CampusMate project documentation”.
- Open the repository page and confirm the README and PDF are visible.

Option B — GitHub Desktop

- Install GitHub Desktop and sign in.
- Clone your new repository to your computer.
- Copy the project files and exported app source into the repository folder.
- Review the changed files, enter a commit summary, and select Commit to main.
- Select Push origin to upload the commit to GitHub.

Option C — Git commands

```
git init
git add README.md .gitignore CampusMate_Project_Documentation.pdf
CampusMate_Base44_Prompt.txt
git commit -m "Add CampusMate project documentation"
git branch -M main
git remote add origin
https://github.com/YOUR-USERNAME/campusmate-college-helpdesk-chatbot.git
git push -u origin main
```

Replace YOUR-USERNAME with your GitHub username. If you cloned an existing repository, you usually do not need to run git init or add the remote again.

12. Public Sharing and Safety

- Never publish passwords, API keys, private keys, tokens, or private student data.
- The supplied college contact details are included because they were explicitly provided for this project; confirm you are authorized to publish them publicly.
- If Base44 provides an export option, include the exported source files and describe any deployment link in README.md.
- Do not claim the chatbot is connected to official college systems unless that integration has actually been implemented and verified.
